MONTEREY HARBOR (BREAKWATER) MONTEREY, CALIFORNIA

CONGRESSIONAL DISTRICT: 17th District, Rep. Sam Farr

PROJECT DESCRIPTION: The project is located in the Monterey Harbor of the City of Monterey, California, which is located approximately 100 miles south of San Francisco. The project consists of a 1700-foot long west breakwater and an eight-foot deep basin near Municipal Wharf No. 1 (Fisherman's Wharf).

FISCAL YEAR 03 BUDGET: \$0

PRESENT STATUS: The west breakwater was constructed in 1934. Following years of gradual settlement, the breakwater crest was restored to its original design elevation in FY93. This effort provided the benefits of the original project; reducing harbor facility maintenance, vessel damage and navigation delays. The Corps dredged the basin near Wharf No. 1 periodically between 1947 and 1957. Since 1957, the City has removed insignificant quantities of material with no request for Federal assistance.

FUTURE EFFORTS: Inspected annually. Next repair contract scheduled FY 03, pending results of inspection and funding availability.
